

Most of the papers in this volume cover computational fluid dynamics (CFD). There are also contributions from the field of experimental methods and diagnostics applied to fluid dynamics, combustions and turbomachinery. The papers discuss diverse topics such as pipe flows, shock tube flows, and compressor flows, as well as velocity and turbulence measures of flow conditioners. There is a survey article on flow computations on high-performance computers. Articles are also devoted to liquid-liquid systems, rotating fluid flows and combustion diagnostics.
