

With the publication of DSM-III, DSM-III-R, and related advances of the 70s and 80s, the mental health field has advanced significantly toward more precise and reliable diagnostic descriptions and more detailed explications of available treatments. In light of this progress, previously held notions regarding pathology, family interaction and dynamics, and family interventions for affective disorders are no longer sufficient. The first volume dedicated solely to marital and family treatment approaches, **AFFECTIVE DISORDERS AND THE FAMILY** advances the field by presenting the most up-to-date integration of knowledge about affective disorders, family interventions, and the optimal matching of treatment to disorder.
