

US Bomber Projects is a series of short magazines or booklets covering eight or so designs of unbuilt American bombardment aircraft per issue. These are all real designs, put forward by major aerospace corporations or government design bureaus; nothing here is science fictional or fantasy... though some may certainly seem like it. The designs in each issue will be unrelated to each other, but there will be "through the issues. The development of the B-48, B-52 and B-59, for example, are covered from the earliest issues. All designs are presented with descriptive text, data and diagrams created specifically for US Bomber Projects. US Bomber Projects #10 contains information and diagrams on: * Boeing Model 464-34-3: A turboprop B-52 predecessor * Martin Model 192-5: A medium-sized flying wing * Republic Mach 7: a relatively small high-speed design * Convair WS-125A: A large nuclear powered supersonic design * Boeing model 484-415: A jet-powered supersonic flying boat * Boeing 464L: Boeings first Dyna Soar * Martin Model 223-10: a 1944 step on the road to the XB-48 * Lockheed CL-1301-1: A very small VTOL ground attacker To see more on US Bomber Projects and related publications, check out: <http://www.aerospaceprojectsreview.com>
